

How To Change Your Lost/Forgotten Windows 7 Login Password And Get Back The Access To Windows

Note: The following tutorial shows you how you can change your lost/forgotten windows login password and get back the access to your computer. Do not use this tutorial for harming other users. The author will not take any responsibility of any crime done by you related to this tutorial.

Step 1 ➡ Download "*Slitaz GNU/Linux*" from <http://www.slitaz.org/en/>

Step 2 ➡ Burn the *Slitaz* ISO file to a blank CD (You may use "Power ISO" for burning).

Step 3 ➡ After finishing the burning process insert the live CD into your CD/DVD drive and restart your computer. Now your computer will boot from the CD. If it doesn't boot from the CD, check your BIOS settings.

Step 4 ➡ Double-click on the "*My documents*" icon on the desktop of *Slitaz* and find the drive in which windows is installed from the left panel.

Step 5 ➡ In the windows drive go to the "System 32" folder (Windows\System32).

Step 6 ➡ Find the file "*Utilman.exe*" and rename it to "*Utilman.exe.bak*".

Step 7 ➡ Find the file "*cmd.exe*" and rename it to "*Utilman.exe*".

Step 8 ➡ Restart your computer and boot with windows, not with *Slitaz* and click on the "*Ease of access*" button at the left bottom corner of the screen. Now windows command prompt will appear.

Step 9 ➡ Type the following command in the command prompt window and press Enter:

```
net user "Your User Name" *
```

Note: Type your user name without quotes.

Step 10 ➡ Type your new password and hit enter. Now type your password again for confirmation and press enter. Hurrah!!! Password is changed successfully.

Step 11 ➡ Now log in to windows with your new password and gain access to your computer.

Step 12 ➡ Now reboot your computer with *SliTaz Live CD* and rename "*Utilman.exe*" to "*cmd.exe*" and also rename "*Utilman.exe.bak*" to "*Utilman.exe*". Now everything is set back to normal. So, just enjoy it !!!!!.....
